SKILLS

Programming Language:

Ruby, Python and Javascript

Web Development:

Ruby on Rails, HTML, CSS, ReactJS, Django

Project Management & Version Control:

Git, GitHub, GitLab, Bitbucket, AWS CodeCommit, Trello, Jira, Agile, SDLC

Databases:

PostgreSQL, MySQL, MongoDB

Testing:

Rspec, Capybara

Technologies:

Redis, Sidekiq, Docker, GrapeAPI, GraphQL, Swagger, CI/CD, Kubernetes

PROFESSIONAL EXPERIENCE

Software Engineer - Ruby On Rails

Webkorps Services India Private Limited

08/2022 – present

Indore, India

- **MVC Architecture Expertise:** Developed intranet applications in Ruby on Rails following MVC design patterns, reducing manual data entry errors by 30% and boosting data accuracy by 25%.
- **Rails Application Development:** Experienced in developing, maintaining, and debugging Rails applications to ensure robustness and scalability.
- **Database Management:** Implemented Rails Migrations and used Active Record for efficient database management. Integrated Action Mailer to automate email notifications, increasing user interaction rates by 50% and customer satisfaction by 30%.
- **CRUD Operations:** Built and optimized CRUD operations using Ruby on Rails' MVC architecture and conducted thorough code reviews for performance improvements.
- **Testing & SDLC:** Proficient in RSpec for testing, migration, and integration processes; strong understanding of SDLC and Object-Oriented Programming concepts.
- **Deployment on Heroku:** Skilled in configuring and deploying Rails applications on Heroku, ensuring seamless cloud integration and optimal performance.
- **Agile Methodologies:** Active participant in Agile processes, including daily scrum sessions, backlog discussions, and dependency resolution for smooth project delivery.
- **Framework Integration & Background Tasks:** Integrated frameworks and tools like Sidekiq for background job execution to enhance application performance.
- **API Development:** Developed custom GraphQL queries and integrated Grape API for efficient data retrieval and flexible API development.

PROJECTS

LiveInsight – Healthcare AI Insights Platform

- Worked as a Full-Stack Developer (backend-focused) to build a multi-tenant healthcare market research platform that transforms millions of unstructured patient conversations into actionable insights using AI and fast search.
- Developed a Rails 7.1 application with secure authentication and authorization using Devise, Pundit, and Rolify, implementing a 5-tier role-based access control system with strict customer-level data isolation.

- Designed and implemented a scalable data ingestion pipeline for CSV uploads from Brandwatch, LiveWorld, and Sprinklr, using AWS S3, Sidekiq, and ActionCable for asynchronous processing and real-time status updates.
- Integrated Elasticsearch (7.17) to index and analyze high-volume social data, enabling sub-second full-text search, sentiment filtering, and date-based analytics across millions of records.
- Built and integrated an AI agent framework via a dedicated microservice, leveraging AWS Bedrock (Claude models) to power search, analytics, summaries, batch insights, and dynamic question generation.
- Implemented a RAG-based knowledge system using AWS Bedrock Knowledge Bases, allowing AI agents to combine patient discussions with clinical and research documents for context-aware insights.
- Designed event-driven workflows using immutable event records to track pipeline operations, providing a full audit trail, improved reliability, and easier debugging.
- Improved UI consistency and maintainability by building reusable ViewComponent-based interfaces with Hotwire, background job optimization, caching, and comprehensive RSpec test coverage.

Timesheet Management System

- Led the development of a comprehensive timesheet management system from inception to deployment, focusing on backend API creation and optimization.
- Collaborated closely with the frontend team to integrate backend functionality with user interfaces, ensuring a cohesive and seamless user experience.
- Implemented RuboCop standards to maintain code quality and readability and robust user authentication and authorization mechanisms to ensure secure access to timesheet features.
- setup of a MySQL database for seamless data storage and retrieval, optimizing database schema for efficient query performance.
- Designed and implemented RESTful routes for the API endpoints, ensuring clear and intuitive access to timesheet functionalities.
- Worked on background jobs to notify team leads via email upon employee timesheet submissions, enhancing workflow efficiency.
- Wrote extensive RSpec tests for APIs to validate functionality and maintain code integrity.
- Optimized codebase for improved performance and scalability, enhancing user experience and system reliability.

Fond

- Developed Granular Admin and Delegation Features.
- Utilized Grape API for Development.
- Implemented Team/Group Recognitions.
- Optimized Existing Functionality for Better Performance.
- Resolved Critical Bugs to Ensure a Seamless User Experience
- Conducted Thorough Cleanup of Unused Code Files.
- Developed and Maintained APIs for Mobile Applications.
- Used Caching Strategies with Redis.
- Utilized Continuous Integration and Continuous Deployment (CI/CD) Tools
